

CERTIFIED BACKFLOW TESTERS IN THE CITY OF SOPCHOPPY WATER SERVICE AREA

Below is a list of testers who have provided the City of Sopchoppy with verification of their certification. If you are using a tester unlisted or a plumber contacted through the phone book, they must contact the City of Sopchoppy first for certification verification. The Florida Department of Environmental Protection will audit test results annually and it is your tester's responsibility to provide the City with a copy of the test form enclosed.

There is no standard testing fee and it is recommended that you contact at least three testers for prices. The size of the backflow device, its location, and the tester's travel time will influence the cost of the test.

When choosing a tester, you may want to inquire about:

- Does the testing fee include the cost of a retest if a repair is needed?
- Does the testing fee include a general cleaning and adding insulation around the device?
- If a major repair is needed, is the tester prepared to replace parts or if needed the complete backflow device in a timely manner? Not all testers are prepared to make repairs, licensed plumbers are and their testing fee includes additional services.

To assist in quality control the City of Sopchoppy will disqualify any tester who falsifies test results or charges for an unneeded repair. The City of Sopchoppy will check devices that have been tested and/or repaired at random. You may call Leonard Tartt if you have any questions at (850)962-4611.

Testers must return the test form to: City of Sopchoppy
